C# Ders1
                                                                          → 10% Ders1.Program
              using System;
      2
       3
            ⊟namespace Ders1
      4
              {
                  0 references
      5
                  class Program
      6
                  {
                      0 references
                      static void Main(string[] args)
      8
      9
                           Console.WriteLine("Hello World!");
     10
     11
     12
     13
```

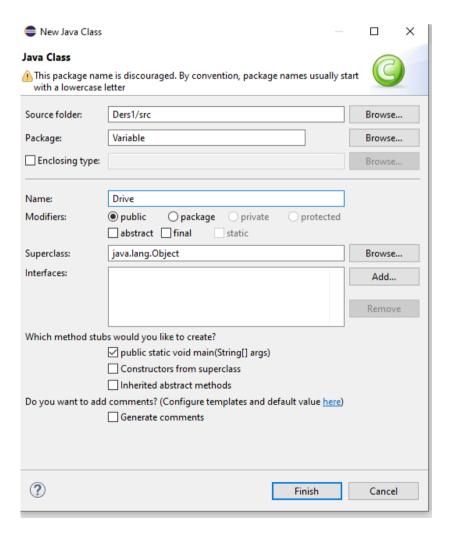

Dosya ismi vs sınıf ismi

Klasör ismi vs namespace, package

```
3 public class Drive {
4
5⊚
      public static void main(String[] args) {
6
          String str = "just a String";
7
          Integer sayi = 10;
8
          Float sayif = 23.3f;
          System.out.println(sayi.getClass().getSuperclass());
9
          System.out.println(sayif.getClass().getSuperclass());
10
          System.out.println(str.getClass().getSuperclass());
11
12
      }
13
     Console.WriteLine(s.GetType().BaseType);
14 }
```

```
class java.lang.Number
class java.lang.Number
class java.lang.Object
```
